DECLARATION OF PERFORMANCE

DoP 0179

for fischer Zykon- Anchor FZA, FZA-D, FZA-I, FZA ST (Mechanical anchor for use in concrete)

1. Unique identification code of the product-type: **DoP 0179**

2. Intended use/es: **Post-installed fastening in cracked or uncracked concrete.**
See appendix, especially annexes   B1- B5

3. Manufacturer: **fischerwerke GmbH & Co. KG, Klaus-Fischer-Str. 1, 72178 Waldachtal, Germany**

4. Authorised representative: **–**

5. System/s of AVCP: **1**

6. European Assessment Document: **EAD 330232-01-0601, (Edition 12/ 2019)**
   European Technical Assessment: **ETA-98/0004; 2020-02-18**
   Technical Assessment Body: **DIBt- Deutsches Institut für Bautechnik**
   Notified body/ies: **1343 MPA Darmstadt / 2873 TU Darmstadt**

7. Declared performance/s:
   Mechanical resistance and stability (BWR 1)

Characteristic resistance to tension load (static and quasi-static loading):	Resistance to steel failure:	Annexes C1-C3	E_S= 210 000 MPa
	Resistance to pull- out failure:	Annexes C1-C3	
	Resistance to concrete cone failure:	Annexes C1-C3	
	Robustness:	Annexes C1-C3	
	Minimum edge distance and spacing:	Annex C7	
	Edge distance to prevent splitting under load:	Annexes C1- C3	
Characteristic resistance to shear load (static and quasi-static loading), Method A:	Resistance to steel failure (shear load):	Annexes C4- C6	
	Resistance to pry-out failure:	Annexes C4- C6	
Characteristic resistance and displacements for seismic performance categories C1 and C2:	Resistance to tension load, displacements, category C1:	Annexes C8, C9	
	Resistance to tension load, displacements, category C2:	Annexes C10, C11, C15	
	Resistance to shear load, displacements, category C1:	Annexes C8, C9	
	Resistance to shear load, displacements, category C2:	Annexes C10, C11, C15	
	Factor for annular gap:	Annexes C8- C11	
Characteristic Resistance for simplified design:	Method B:	NPD	
	Method C:	NPD	
Displacements and durability:	Displacements under static and quasi-static loading:	Annexes C14, C15	
	Durability:	Annexes A7, B1	

   Safety in case of fire (BWR 2)
   Reaction to fire: Class (A1)

Resistance to fire:	Fire resistance to steel failure (tension load):	Annexes C12, C13
	Fire resistance to pull-out failure (tension load):	Annexes C12, C13
	Fire resistance to steel failure (shear load):	Annexes C12, C13

8. Appropriate Technical Documentation and/or Specific   –
    Technical Documentation:

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

Thilo Pregartner, Dr.-Ing.   Peter Schillinger, Dipl.-Ing.
Tumlingen, 2020-03-03

This DoP has been prepared in different languages. In case there is a dispute on the interpretation the English version shall always prevail.

The Appendix includes voluntary and complementary information in English language exceeding the (language-neutrally specified) legal requirements.

Specific Part

1 Technical description of the product

The fischer-Zykon-Anchor FZA, FZA-D, FZA-I and FZA ST is an anchor made of galvanised or stainless or high corrosion resistant steel which is placed in an undercut hole and anchored by mechanical interlock with displacement-controlled installation.

The bolt projection anchor FZA and the through bolt anchor FZA-D consists of a conical bolt with external thread, an expansion sleeve and a hexagon nut with washer. The internal threaded anchor FZA-I consists of a conical bolt with internal thread and an expansion sleeve. The bold projecting anchor FZA ST consists of a conical bolt with hexagon projecting end, an expansion sleeve with colour marking, a hexagon nut with washer and a plastic sleeve.

The anchor is anchored by impact acting on the expansion sleeve over the cone bolts in the undercuts of the borehole.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the fastener is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the fastener of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

| Essential characteristic	Performance
Characteristic resistance to tension load (static and quasi-static loading)	See Annex C1 to C3, Annex C7
Characteristic resistance to shear load (static and quasi-static loading)	See Annex C4 to C6
Displacements (static and quasi-static loading)	See Annex C14 to C15
Durability	See Annex B1
Characteristic resistance and displacements for seismic performance categories C1 and C2	See Annex C8 to C11

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C12 to C13

4   Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with the European Assessment Document EAD 330232-01-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

Base materials:
- Compacted reinforced or unreinforced normal weight concrete without fibers of strength classes C20/25 to C50/60 according to EN 206:2013+A1:2016

Use conditions (Environmental conditions):
- Structures subject to dry internal conditions

  (Zinc plated steel, hot-dip galvanized steel, stainless steel, high corrosion-resistant steel)

- For all other conditions according to EN 1993-1-4:2006 + A1:2015 corresponding to corrosion resistance class
  - CRC III for FZA A4
  - CRC V for FZA C

Design:
- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work

- Verifiable calculation notes and drawings are to be prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e.g. position of the anchor relative to reinforcement or to supports, etc.)

- Design of fastenings according to EN 1992-4:2018

fischer-Zykon-Anchor FZA, FZA D, FZA I, FZA ST

Intended Use
Installation parameters

Annex B2

Installation instructions for FZA, FZA D, FZA I, FZA ST

- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site
- Use of the anchor only as supplied by the manufacturer without exchanging the components of the anchor
- Checking before placing the anchor to ensure that the strength class of the concrete in which the anchor is to be placed is in the range given and is not lower than that of the concrete to which the characteristic loads apply
- Check of concrete being well compacted, e.g. without significant voids
- Drill hole created perpendicular +/- 5° to concrete surface, positioning without damaging the reinforcement
- In case of aborted hole: new drilling at a minimum distance twice the depth of the aborted drill hole or smaller distance if the aborted drill hole is filled with high strength mortar and if under shear or oblique tension load it is not in the direction of load application
- Fastenings in stand-off installation or with a grout layer under seismic action are not covered
- In case of seismic applications, the fastener shall be positioned outside of critical regions (e.g. plastic hinges) of the concrete structure
- Anchor must be installed to comply with the correct anchorage depth. This is assured when the front face of the sleeve, for the internal thread, is approximately 1mm below the concrete surface or, in the case of the through bolt versions, approximately 1mm below the front surface of fixture. When using the FZA 12x40 ST the knurling on the sleeve is flush or below the concrete surface. For the bolt version the anchor is correctly expanded if the colour marking on the thread of the tapered bolt is visible.

---

fischer-Zykon-Anchor FZA, FZA D, FZA I, FZA ST

Intended Use
Installation instructions

Pre-positioned installation

FZA

FZA I

FZA ST
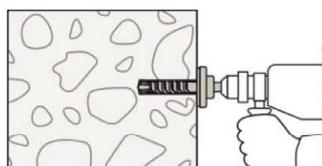

1.: Create a drill hole perpendicular to the surface of the anchor base with a hammer drill, using the corresponding Zykon universal drill bit FZUB. The required drill depth is reached once the FZUB depth stop meets the concrete.
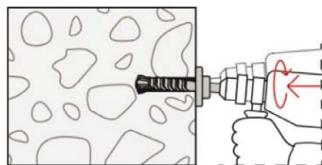

2.: Once the FZUB depth stop meets the concrete, create the drill hole undercut by making circular swiveling movements with the hammer drill while the hammer mechanism is engaged. Press the hammer drill firmly against the anchor base: 1 - 2 swiveling movements are sufficient for $\varnothing$ 14 mm, with 3 - 5 movements for $\varnothing$ 18 mm and $\varnothing$ 22 mm.
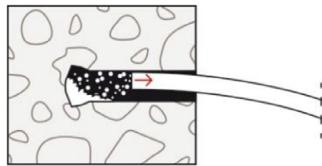

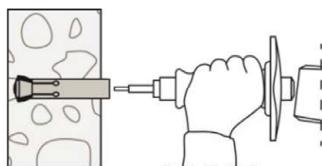

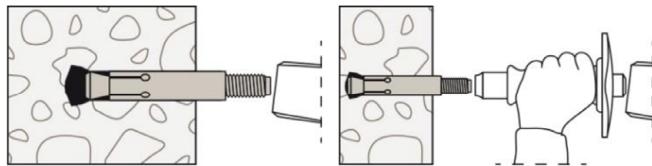

3.: Clean drill hole.

4.: Insert the anchor into the drill hole and then drive the expansion sleeve in with hammer-set device FZE Plus, using a manual hammer.
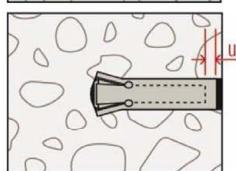

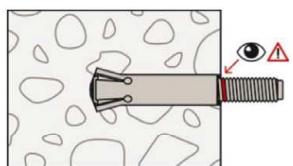

5.: The anchor is correctly expanded if the colour marking on the thread of the tapered bolt is visible or the gap u between conical bolt with internal thread and expansion sleeve (FZA I) is fulfilled. When using the FZA 12x40 ST the knurling on the sleeve is flush or below the concrete surface.
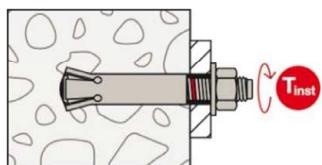

6.: Mount installation object (e.g. anchor plate), washer and nut, screw (for FZA I) or threaded rod with washer and nut (for FZA I) and apply installation torque with torque spanner.
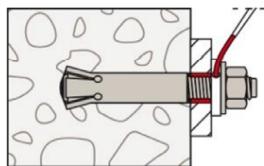

Optional: The gap between bolt and fixture may be filed with mortar (compressive strength $\geq$ 50 N/mm² e.g. FIS SB) after step 6 (for eliminating the annular gap). The filling disc is additional to the standard washer. The thickness of the filling disc must be considered for definition of t_{fix}. Countersunk of the filling disc in direction to the anchor plate.

---

fischer-Zykon-Anchor FZA, FZA D, FZA I, FZA ST

Intended Use
Installation instructions

Push-through installation

FZA D
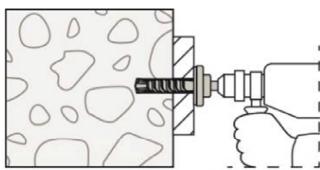

1.: Create a drill hole through the installation object perpendicular to the surface of the anchor base with a hammer drill, using the corresponding Zykon universal drill bit FZUB. The required drill depth is reached once the FZUB depth stop meets the fixture.
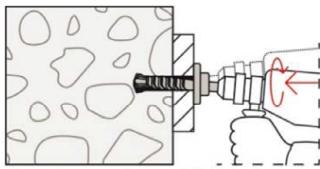

2.: Once the FZUB depth stop meets the fixture, create the drill hole undercut by making circular swiveling movements with the hammer drill while the hammer mechanism is engaged. Press the hammer drill firmly against the anchor base: 1 - 2 swiveling movements are sufficient for $\varnothing$ 14 mm, with 3 - 5 movements for $\varnothing$ 18 mm and $\varnothing$ 22 mm.
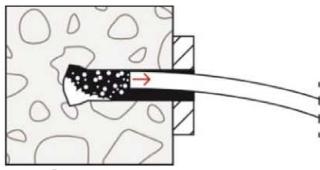

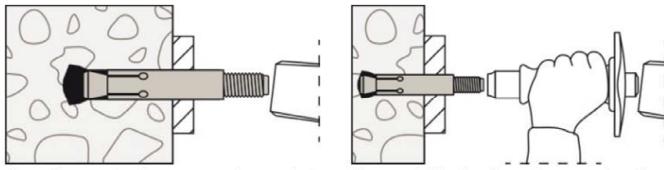

3.: Clean drill hole.

4.: Insert the anchor into the drill hole through the installation object (e.g. anchor plate) and then drive the expansion sleeve in with hammer-set device FZE Plus, using a manual hammer.
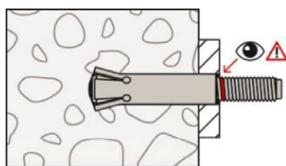

5.: The anchor is correctly expanded if the colour marking on the thread of the tapered bolt is visible.
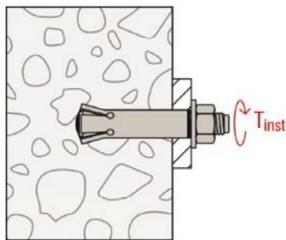

6.: Mount installation object (e.g. anchor plate), washer and nut and apply installation torque with torque spanner.

# Table C1.1: Characteristic values of **tension** resistance under static and quasi-static action for **bolt projecting anchor FZA**

Type of anchor / size		10x40 M6 / t_{fix}	12x40 12x40 ST M8 / t_{fix}	14x40 14x40 ST M10 / t_{fix}	12x50 M8 / t_{fix}	14x60 14x60 ST M10 / t_{fix}	18x80 M12 / t_{fix}	22x100 M16 / t_{fix}	22x125 M16 / t_{fix}
Steel failure for FZA galvanized									
Characteristic resistance $N_{Rk,s}$ [kN]		16,1	29,3	46,4	29,3	46,4	67,4	125,6	
Partial factor γ_{Ms} [-]		1,5							
Steel failure for FZA hot-dip galvanized									
Characteristic resistance $N_{Rk,s}$ [kN]		13,1	25,0	40,7	25,0	40,7	60,1	115	
Partial factor γ_{Ms} [-]		1,5							
Steel failure for FZA A4									
Characteristic resistance $N_{Rk,s}$ [kN]		14,1	25,6	40,6	25,6	40,6	59,0	109,9	
Partial factor γ_{Ms} [-]		1,87							
Steel failure for FZA C									
Characteristic resistance $N_{Rk,s}$ [kN]		14,1	25,6	40,6	25,6	40,6	59,0	109,9	
Partial factor γ_{Ms} [-]		1,5							
Modulus of elasticity E_s [N/mm²]		210.000							
Pullout failure for FZA, FZA A4, FZA C									
Characteristic resistance in concrete C20/25 — cracked $N_{Rk,p}$ [kN]		6			9	12	24	40	
Characteristic resistance in concrete C20/25 — uncracked		12			17,4	22,9	35,2	49,2	68,8
Increasing factors concrete ψ_c [-] — C25/30		1,12							
C30/37		1,22							
C35/45		1,32							
C40/50		1,41							
C45/55		1,50							
C50/60		1,58							
Installation factor γ_{inst} [-]		1,2			1,0				
Concrete cone failure and splitting failure for FZA, FZA A4, FZA C									
Effective embedment depth h_{ef} [mm]		40			50	60	80	100	125
Factor for uncracked concrete $k_{ucr,N}$ [-]		11,0							
Factor for cracked concrete $k_{cr,N}$ [-]		7,7							
Minimum thickness of concrete member h_{min}		100			110	130	160	200	250
Characteristic spacing $S_{cr,N} = S_{cr,sp}$ [mm]		$3\,h_{ef}$							
Characteristic edge distance $C_{cr,N} = C_{cr,sp}$		$1,5\,h_{ef}$							
Characteristic resistance to splitting $N^0_{Rk,sp}$ [kN]		min $\{N^0_{Rk,c}; N_{Rk,p}\}$[1]							

[1] $N^0_{Rk,c}$ according to EN 1992-4:2018

Table C10.1: Characteristic values for **seismic performance category C2** for **bolt projecting anchor FZA**

Type of anchor / size		FZA (bolt projecting anchor)				
		14x40 M10 / t_{fix}	14x60 M10 / t_{fix}	18x80 M12 / t_{fix}	22x100 M16 / t_{fix}	22x125 M16 / t_{fix}
Steel failure FZA galvanized						
Characteristic resistance	$N_{Rk,s,C2}$ [kN]	46,4		67,4	126,0	
Partial factor	$\gamma_{Ms,C2}$ [-]	1,50				
Steel failure FZA hot-dip galvanized						
Characteristic resistance	$N_{Rk,s,C2}$ [kN]	40,7		60,1	115,0	
Partial factor	$\gamma_{Ms,C2}$ [-]	1,50				
Steel failure FZA A4						
Characteristic resistance	$N_{Rk,s,C2}$ [kN]	40,6		59,0	110,0	
Partial factor	$\gamma_{Ms,C2}$ [-]	1,87				
Steel failure FZA C						
Characteristic resistance	$N_{Rk,s,C2}$ [kN]	40,6		59,0	110,0	
Partial factor	$\gamma_{Ms,C2}$ [-]	1,50				
Pullout failure						
Characteristic resistance in cracked concrete	$N_{Rk,p,C2}$ [kN]	6,0	7,5	24,0	25,0	40,0
Installation factor	$\gamma_{2,C2}$ [-]	1,50				
Steel failure without lever arm FZA galvanized / hot-dip galvanized						
Characteristic resistance	$V_{Rk,s,C2}$ [kN]	15,6		24,5	47,0	
Partial factor	$\gamma_{Ms,C2}$ [-]	1,25				
Steel failure without lever arm FZA A4						
Characteristic resistance	$V_{Rk,s,C2}$ [kN]	16,1		25,3	52,3	
Partial factor	$\gamma_{Ms,C2}$ [-]	1,56				
Steel failure without lever arm FZA C						
Characteristic resistance	$V_{Rk,s,C2}$ [kN]	16,1		25,3	52,3	
Partial factor	$\gamma_{Ms,C2}$ [-]	1,25				

Table C10.2: Annular gap for **seismic action category C2**

Δ_{gap}							
$\Delta_{gap} = d_f - d$ [mm]	0,00[1]	0,25	0,50	0,75	1,00	1,25	$\geq 1,50$
α_{gap}	1,00	0,86	0,75	0,66	0,60	0,54	0,50

Performances
Characteristic values for seismic performance category C2
for bolt projecting anchor FZA

Table C11.1: Characteristic values for **seismic performance category C2** for through bolt anchor FZA D

Type of anchor / size		FZA D (through bolt anchor)				
		14x80 M10D/20	14x100 M10D/40	18x100 M12D/20	18x130 M12D/50	22x125 M16D/25
Steel failure FZA D galvanized						
Characteristic resistance	$N_{Rk,s,C2}$ [kN]	46,4		67,4		126,0
Partial factor	$\gamma_{Ms,C2}$ [-]	1,50				
Steel failure FZA D hot-dip galvanized						
Characteristic resistance	$N_{Rk,s,C2}$ [kN]	40,7		60,1		115,0
Partial factor	$\gamma_{Ms,C2}$ [-]	1,50				
Steel failure FZA D A4						
Characteristic resistance	$N_{Rk,s,C2}$ [kN]	40,6		59,0		110,0
Partial factor	$\gamma_{Ms,C2}$ [-]	1,87				
Steel failure FZA D C						
Characteristic resistance	$N_{Rk,s,C2}$ [kN]	40,6		59,0		110,0
Partial factor	$\gamma_{Ms,C2}$ [-]	1,50				
Pullout failure						
Characteristic resistance in cracked concrete	$N_{Rk,p,C2}$ [kN]	6,0	7,5	24,0	25,0	40,0
Installation factor	$\gamma_{2,C2}$ [-]	1,50				
Steel failure without lever arm FZA D galvanized / hot-dip galvanized						
Characteristic resistance	$V_{Rk,s,C2}$ [kN]	15,6		24,5		47,0
Partial factor	$\gamma_{Ms,C2}$ [-]	1,25				
Steel failure without lever arm FZA D A4						
Characteristic resistance	$V_{Rk,s,C2}$ [kN]	16,1		25,3		52,3
Partial factor	$\gamma_{Ms,C2}$ [-]	1,56				
Steel failure without lever arm FZA D C						
Characteristic resistance	$V_{Rk,s,C2}$ [kN]	16,1		25,3		52,3
Partial factor	$\gamma_{Ms,C2}$ [-]	1,25
